

WORLD ENVIRONMENT DAY

15th of June, 2024 was an auspicious experience from our college JBIET as we went on a Camp to a village named 'MURTHUZGUDA' located in Moinabad district. This camp was especially about environment day where we were able to go watch different types of fields of this village with varieties of Rose plants and many more as a part of the camp. We have also learnt a lot about environmental issues in this trip and also the best part of this mother earth, The NATURE. Being a part of this camp, we have met the nature and had lots of fun filling experience in the fields.

At first, we hopped out from the bus after reaching the location to go to the Gram Panchayat office in the guidance of MR. B. KISHORE KUMAR sir. Firstly, he taught us about how the politics work in the areas from urban to rural. He gave us a good teaching in which the students could be able to know lot more about the villages and its circumstances. After this we were divided into five batches of 8-10 each.

Then comes the interesting part, which is ofcourse exploring the fields by which we got more closer to the nature and the mother Earth. This is also a fun filling learnings as the

nature there was such a mesmerising view to watch. Not just to watch but also to learn. Entering the Rose fields/garden, we have come across drip-irrigation. Here we learnt about how to use the water properly without wasting it. To ensure the proper usage of water, the farmers in this village used the process of drip-irrigation for the Rose fields. We also saw different types of Rose plants. By which we have learnt the various kinds of roses grown all over the village.

After the field trip, we all sat together to have lunch while rewinding our learnings from each group. This taught us that whatever the situation is, when you have people around you to share experiences, the life gets easier and can be better than being alone. We mainly focused on learnings about the farms and the way of growing plants in this trip. We have also come across the different sands used for different crops. Not just about farms and lands we have learnt a few things about the village and its history too. In this way, we have ended this joyful trip where there were new people, new experiences and new learnings.

At the end of the day, eventhough it was a sunny day we came back with the joy of learning new things, meeting new people and getting a disciplined experiences.
